

Google Ads API Tool — Design Document

Keif Aldiafa (■■■■ ■■■■■■■■)

Company: Keif Aldiafa — Saudi hospitality & coffee-service company

Website: <https://keifaldiafa.com>

Location: Jeddah, Saudi Arabia

Account type: Advertiser (single, own account)

Access requested: Basic Access

1. Purpose & Business Model

Keif Aldiafa provides premium Saudi coffee-hospitality services (coffee servers "■■■■■■■■/■■■■■■■■", female servers "■■■■■■■■", waiters "■■■■■■■■") for weddings, receptions, corporate events, and private gatherings in Jeddah, Saudi Arabia.

We advertise these services on Google Search to reach customers searching for hospitality services. The conversion action is a WhatsApp click / phone call for booking.

2. What the Tool Does (Internal Use Only)

The tool is an **internal campaign-management and reporting utility** for our OWN single Google Ads account. It does NOT manage external clients' accounts. Functions:

- **Performance reporting:** Pull campaign / ad group / keyword / search-term reports (clicks, impressions, cost, CTR, conversions) for internal analysis.
- **Keyword management:** Add and update keywords and **negative keywords** based on search-term analysis to reduce wasted spend.
- **Bid & budget monitoring:** Read current bids/budgets and adjust max CPC within our defined limits.
- **Alerting:** Notify our team of anomalies (e.g., zero conversions, budget overspend, low impression share).

3. Technical Design

- **Language:** Python (google-ads client library).
- **Auth:** OAuth 2.0 (refresh token) + Developer Token, scoped to our own MCC/account only.
- **Operations used (read):** GoogleAdsService.SearchStream (campaign, ad_group, keyword_view, search_term_view metrics).
- **Operations used (write):** CampaignCriterionService (negative keywords), AdGroupCriterionService (keywords), CampaignBudgetService (budget), AdGroupCriterion bids.
- **Frequency:** Scheduled daily reporting + on-demand optimization runs.

- **Data flow:** API → our internal server → summary reports to our team (Telegram/email). No data resold or shared externally.

4. Audience / Access

- **Users:** Internal only — the business owner and our marketing operator.
- **No external/client access.** Single advertiser account.
- **Not used** for App Conversion Tracking / Remarketing API.
- **Not** developed by a third party — built and used by us.

5. Compliance

- Complies with Google Ads API Terms & Policies (Required Minimum Functionality, rate limits, no unauthorized data storage).
- Respects API quotas; batches operations; honors Retry-After / 429.
- Uses data solely to optimize our own advertising performance.

Prepared for Google Ads API Basic Access application — Keif Aldiafa, 2026.
